

What was the most challenging piece of this assignment? Did you find it easy or challenging to work with HTML and CSS? How long did this overall assignment take you?

The most challenging part is designing the website. I spent a lot of time on finding good design and trying to get inspiration. The implementation was not very difficult for me but I indeed spend some time on including all CSS properties and features listed in the requirements.

What decisions did you make when you made your site mobile friendly?

I found flex a really useful property when coming to make a responsive web page. By flex, the items in the container could adjust their position based on the width of the container. Also, using 40% rather than 200px as the value of width can make the position of items more flexible.

What did you take into account when you developed the design of your website? Is there anything that you're particularly proud of?

I think a colored background can make the website more attractive at first glance. Therefore, I set the background of the website to purple and I also set a gradient color to make it more active. In the contact page, I designed a small interaction, when user hovers on the icon of the contact item, the icon will slide to right side and text underneath will be shown up. This design is something I am particularly proud of.

Given more time or resources, what additional features would you add to your site in the future?

If I have more time, I think I will add more dynamic effect on the element. For example, the pictures do not directly show up, there will be an animation like inserting from the left.

How many hours did you spend on this assignment?

I spent a whole afternoon and a whole evening on this assignment, about 6-8 hours in total.
